PROFESSIONAL SUMMARY

M.S. in Business Analytics candidate with experience in data analysis, predictive and prescriptive analytics, and data engineering across academic and industry-sponsored projects. Proven ability to lead inclusive environments and translate data insights to technical and non-technical stakeholders. Selected by faculty to lead team of 4 for graduate capstone project.

- **Relevant Coursework:** Data Engineering, Data Mining, Statistical Methods, Decision Optimization, Text Mining

EDUCATION

University of Tennessee

Knoxville, TN

Haslam College of Business - *Master of Science in Business Analytics*

May 2026

College of Education, Health, and Human Sciences - *Bachelor of Science in Sports Management and Recreation*

May 2025

EXPERIENCE

NISSAN, Capstone Project Manager, Knoxville, TN

January 2026 – Present

- Create custom Cortex Analyst Application to enable data queries to streamline data access for non-technical business users
- Design and implement Semantic Model to serve as centralized data source for Cortex Analyst Application
- Spearhead task and time management across 5-member analytics team to ensure optimal efficiency and collaboration

EMERALD YOUTH FOUNDATION, Data Intern, Knoxville, TN

June 2025 – Present

- Assist in evaluating school and zone characteristics to identify underserved and economically disadvantaged communities
- Conducted exploratory analysis to identify patterns between schools served versus potential target areas
- Researched and integrated census data and school-level data to analyze potentially useful community demographics and economic indicators

HASLAM COLLEGE OF BUSINESS, Graduate Teaching Assistant, Knoxville, TN

August 2025 – Present

- Hold weekly open office hours to provide additional assistance with course material for total of 706 students for undergraduate data visualization courses and undergraduate lean operations courses over two semesters
- Assist professor by grading student dashboards in Tableau and evaluating in-person student presentations for undergraduate data visualization

PROJECTS

DATA ENGINEERING PROJECT, University of Tennessee, Knoxville, TN

September 2025 – December 2025

- Built fully functional centralized feature store to allow consistent features for machine learning models
- Designed Application Programming Interface (API) to support effortless feature retrieval for modeling workflows without baseline SQL knowledge
- Collaborated through GitHub utilizing pull requests to produce reliable data pipeline

NATIONAL RISK INDEX PROJECT, University of Tennessee, Knoxville, TN

November 2025 – December 2025

- Analyzed FEMA's National Risk Index (NRI) data to examine potential relationships between socially vulnerable populations and expected annual loss across counties in the U.S.
- Built predictive models to perform hazard specific analysis of tornado risk scores at the county level using socioeconomic and geographic features
- Interpreted model output to identify key drivers of tornado risk and assess model performance relative to naïve baseline
